Edge Joining Foot

(ESG-EJF)

Instructions

The Baby Lock Edge Joining Foot is similar to the standard presser foot with the addition of positioning marks and a guide in the center of the foot. The guide allows you to properly align two edges, while keeping the joining point centered under the foot. The 2nd mark on the left and the indentation on the right assist in guiding two pieces of fabric or lace for balanced stitching.

MACHINE SETTINGS (Edge Joining)

Stitch:	Couching or fagoting stitch
Stitch length:	Pre-set
Stitch width:	5.0

Place one piece of lace or fabric with a clean-finished edge to the right of the guide and another to the left of the guide. This will allow the stitch to fall evenly spaced on both sides.

Note: Stitch length and width can be adjusted according to the type of stitch selected.

MACHINE SETTINGS (Edge Stitching)

Stitch:	Straight stitch
Stitch length:	2.5
Stitch width:	Adjustable

Not only can this foot be used for joining two pieces of fabric, it can also be used for narrow edge stitching. Align the fabric edge with the guide and select a straight stitch in the left needle position; move the needle position to the desired distance from the fabric edge.
