

Regalia (BLRG20) Machine Update Version V.4.63

We are continually making improvements to Regalia machine software. Changes addressed in this release are as follows:

- Smooths the first half-stitch after power up.
- Pro-Stitcher is now back in control of location polling on or off.
- Easy-Set Tension readout number will stay consistent on power-up.
- Fixed download file header so any previous version of code can load this version.
- Adds an abrupt motor shut-off when the 48Volt power drops below 25Volts (thread lock or machine jam) and the machine has been started (motor may or may not be running).
